Chemical warfare - Wikipedia Chemical warfare (CW) involves using the toxic properties of chemical substances as weapons. This type of warfare is distinct from nuclear warfare and biological warfare, which together make up NBC, the military acronym for nuclear, biological, and chemical (warfare or weapons), all of which are considered "weapons of mass destruction" (WMDs. Chemical Warfare: What are the Types of Chemical Weapons? Injury from chemical weapon agents, known as CWAs, may result from industrial accidents, military stockpiling, war, or a terrorist attack. Industrial accidents are a significant potential source of exposure to chemical agents. Chemicals such as phosgene, cyanide, anhydrous ammonia, and chlorine are. Chemical weapons in World War I - Wikipedia The use of toxic chemicals as weapons dates back thousands of years, but the first large scale use of chemical weapons was during World War I. They were primarily used to demoralize, injure, and kill entrenched defenders, against whom the indiscriminate and generally very slow-moving or static nature of gas clouds would be most effective.

Chemical Warfare - Spartacus Educational Chemical Warfare Primary Sources As the United States is the most advanced industrial nation in world it was able to make full use of the latest developments in technology in its war against North Vietnam. Chemical Warfare: Poison Gases in World War I | Compound ... Click to enlarge I'll be accompanying some of the students from my school on a history trip to Ypres and a few other World War I battlefields in a few weeks' time. Obviously, they'd much rather be learning chemistry, so I've been reading up on the different chemical agents used during World War I, and this graphic is a byproduct of that. As it.
